## Dutch Farm International BV

Glad to meet you!

Backed by 50 years of experience in the development and production and more than 20 years in global registration and marketing, Dutch Farm International is your reliable partner for high quality veterinary pharmaceutical products!

Established in 1960 as Havee Company, we continued in 1996 under the name of Dutch Farm Veterinary Pharmaceuticals. In 2005 we separated the international registration and sales activities and established Dutch Farm International B.V. Our company is located in Nederhorst den Berg, at short distance from Amsterdam.

Dutch Farm International offers a wide range of generic products: antibiotics, penicillins, anthelmintics, vitamin preparations, disinfectants, feed additives and others. Our company is GMP licensed and regularly inspected by the Dutch authorities.

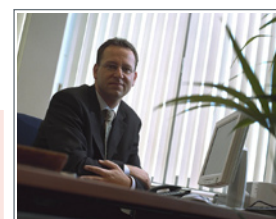

We are focussing on longlasting relationships, based on reliability, flexibility and co-operation. We do not compromise about the high quality standard of our products and work with GMP-licensed partners only. More

detailed information about our company and products can be found in our website [www.dutchfarmint.com](http://www.dutchfarmint.com). Of course, you can contact us any time to obtain more detailed information.

We are looking for distributors in countries which are not yet covered by our existing partners.

Thanks a lot for your interest in our company and our veterinary pharmaceutical products. We are looking forward to work with you!

Nederhorst den Berg, April 2010

Maurice Breed, director

# Dutch Farm products

It is our pleasure to offer you a range of about 100 products: injectables, oral liquids, watersoluble powders, tablets and liquids or ointments for external use. New generation products are introduced regularly. The latest issue of our full Product Summary can be downloaded from [www.dutchfarmint.com](http://www.dutchfarmint.com). In case of specific requirements, do not hesitate to check our opportunities!

## Introducing: Dufa-Calcio 50

Dufa-Calcio 50 is a low volume parenteral Calcium supplement. Whereas Calcium chloride is very tissue irritating, Calcium gluconate is recognised as being much less so. Addition of a boron atom to the Calcium gluconate to form Calcium borogluconate (CBG) greatly increases the solubility and the stability of the available Calcium.

Dufa-Calcio 50 contains a new Calcium-Magnesium complex using citric-, gluconic- and boric acid. This formula has a low boric acid concentration and releases calcium and magnesium in a constant proportion to ensure good compatibility. The lack of free boric acid also means that potential adverse effects on the cardiovascular system are minimised and the 2 aminoethyl dihydrogen phosphate gives additional metabolic stimulation.

Although Calcium ions act directly on the heart muscle, Dufa-Calcio 50 can be infused relatively quickly intravenously with no stress on the cardiovascular system.

Dufa-Calcio 50 is indicated in disorders caused by (acute) hypocalcaemia and hypomagnesaemia such as parturient paresis and eclampsia as well as uterine inertia in large and small animals and can be administered by intravenous or subcutaneous injection.

Dufa-Calcio is available in 100 ml glass bottles and 250ml and 500 ml plastic bottles.

More detailed information: see our Product Summary.

## Flock/herd medication

Administration through drinking water or feed

Regularly, we receive requests for recommendations about the administration of our oral products through drinking water or feed.

As a safe and effective administration depends on knowledge about the circumstances, the animals and the product, we have placed an indept article on our website for your information. Click on the "Flock/herd medication" link on the lefthand side of our homepage.
