

## **DUFAQUONE 5% INJ**

### **Composition:**

Contains per ml solution:

Buparvaquone..... 50 mg

### **Description:**

Buparvaquone is a second generation hydroxynaphtaquinone active against both the schizont and piroplasm stages of *Theileria* spp., and can be used during the incubation period or when clinical signs are apparent.

### **Indications:**

Theileriosis in cattle, caused by the intracellular protozoan parasites *Theileria parva* (East Coast fever, Corridor disease, Zimbabwean theileriosis) and *T. annulata* (tropical theileriosis).

### **Contraindications:**

Hypersensitivity to buparvaquone. Do not administer by IV or SC injection. Theileriosis can interfere with the immune system, therefore a vaccination program should be postponed.

### **Dosage and administration:**

For intramuscular administration.

Recommended dose ..... 1 ml per 20 kg body weight

In severe cases the treatment may be repeated after 48-72 hours.

### **Side effects:**

Localised, painless, oedematous swelling may occasionally be seen at the injection site.

### **Withdrawal times:**

Meat: 42 days

Milk: 2 days

### **Storage conditions:**

Store dark and below 25°C. Do not freeze.

### **Packing:**

50 ml vials.
