

DufaFeed Deli-Lick

DufaFeed's Deli-Lick buckets are an easy and practical way to ensure the intake of all necessary minerals and vitamins, additionally to the daily feed requirements of an animal.

Minerals, trace elements and vitamins are essential elements providing proper functioning to the animal. Extreme deficiency of one of these elements can lead to reduction of growth, fertility, production and other health related problems.

DufaFeed offers Deli-Lick buckets for several animal species. Animal species have different needs of minerals, trace elements and vitamins, based on different factors, such as production, growth, stress, etc. Using a Deli-Lick bucket ensures unlimited supply and the animals are able to consume as much as they need.

Deli-Lick buckets are weather resistant and can be used on a solid place, freely available in the shed or in the open field.

DutchFarm

INTERNATIONAL

Backed by more than 55 years of experience in development and production and 25 years in global registration and marketing, Dutch Farm International BV is your reliable partner in high-quality products for the animal production industry.

Dutch Farm International's products are available in more than 50 countries worldwide, under four brandnames: DutchFarm (veterinary pharmaceuticals and nutraceuticals), DufaMix (premixtures and additives), DufaSept (detergents and disinfectants) and DufaFeed (compound - and complimentary feed).

Dutch Farm International stands for premium quality products, for effective pharmaceuticals, essential nutrients, farm hygiene and food safety, because we want your animals to be healthy, strong and productive. We do it all, every day...

Deli-Lick

The whole range of DufaFeed Deli-Lick buckets contains the essential minerals: calcium, phosphorous, sodium and magnesium. Calcium, the most abundant mineral in the body, is an important constituent of the skeleton and teeth. Deficiency of this mineral can result in poor development, decrease of milk production and teeth problems.

Phosphorous deficiency and its association with calcium can lead to fertility problems and a decrease in dry matter intake. Furthermore, phosphorous plays a vital role in energy metabolism. Subnormal growth in young animals and low live bodyweight gains in mature animals are characteristic symptoms of deficiency.

Sodium is an important mineral for the soft tissues and body fluids. Due to a lack of sodium intake, animals will grow slower and the milk production will decrease.

A deficiency can cause various health problems in horses.

Magnesium is an essential mineral, especially for ruminants. A deficiency of magnesium can cause nervousity, muscle cramping and hypomagnesemia.

Other ingredients are the essential trace elements.

Cobalt is very important for ruminants. A shortage results in a deficiency of vitamin B12, essential for the growth and maturation, wool growth and energy production.

Selenium is indispensable for the immune system and muscle development. A shortage can result in weakness, impaired movement, mastitis, arched back, etc.

Copper supports many functions in the animal. There is a variety of deficiency symptoms, like anaemia, growth disturbances, bone disorders, scouring, infertility, depigmentation of hair and wool, gastrointestinal disturbances and lesions in brain and spinal cord. A high level of copper can be toxic for sheep. Our Sheep Deli-Lick does not contain copper for this reason.

Other trace elements in Deli-Lick are manganese, zinc and iodide, all in the amounts the animals need.

Vitamins such as A, D3, E and the B-Complex vitamins are included in the Deli-Lick formulations if necessary for the specie. Most of the vitamins are being obtained from the diet and are necessary for normal metabolism in animals. Vitamins deficiency can lead to different health and production problems.

Molasses is another ingredient in Deli-Lick. The pleasant smell and taste attract the animal to consume from the palatable Deli-Lick daily!

The level of molasses has been minimized to avoid creating a too luxury consumption, but is high enough to offer the animal the benefits of this ingredient.

Beef Cattle Deli-Lick

- Specially formulated for beef cattle
- Optimal balance between calcium and phosphorous
- Essential minerals and trace elements are available
- No synthetic vitamins included
- 1 bucket per 10 beef cattle, 75-200 gram per beef cattle per day

Dairy Cow Deli-Lick

- Supplementary to roughage diet
- Optimizes production
- Cobalt included as essential element for vitamin B12
- Improves udder health
- Support fertility
- 1 bucket for several dairy cows; 75-200 gram per dairy cow per day

Goat Deli-Lick

- Essential minerals, trace elements and vitamins
- Include copper
- Improves immunity
- 1 bucket per 10 goats, 25-50 gram per goat per day

Sheep Deli-Lick

- Tasty product
- Optimal supplement for minerals, trace elements and vitamins
- No copper included
- For sheep and lamb
- 1 bucket per 10 sheep, 25-50 gram per sheep per day
