

DUFA-CALCIO D3 ORAL

Composition:

Contains per ml oral solution:

Vitamin D3 (3a671)	2,200 I.U.
Calcium (as chloride; gluconate)	37.4 mg
Magnesium (as chloride)	2.75 mg
Phytase	55 FYT

Description, indications:

DUFA-CALCIO D3 ORAL is an oral mixture, an unique all-in-one formulation containing calcium, magnesium, a stable, well-emulsified vitamin D3 for optimal uptake, and a phosphorous releaser to increase bioavailability.

The mixture of calcium salts and chelates are characterized by a high bioavailability.

- The microelement magnesium is essential for the bone- and egg shell matrix.
- Vitamin D3 regulates calcium, phosphorous and magnesium metabolism, thus is essential for bone formation and a good egg shell quality.
- The phosphorous activator releases more organic phosphorous from its reserves in feed.

Dufa-Calcio D3 Oral is pH neutral and has excellent vitamin stability. It fortifies the musculo skeletal integrity and supports the formation of high quality egg shells.

Dosage and administration:

For administration in drinking water.

500 – 1000 ml per 1000 L drinking water for 3 – 5 days.

For prevention, administration of one day per week seems to be enough.

Do not combine with other products.

Precautions:

Do not exceed the maximum allowed concentration of vitamin D3 in feed from broilers and turkeys, of 5,000 IU/kg.

Withdrawal times:

None.

Storage conditions:

Store in a dark and cool area. Do not freeze. Protect from direct sunlight.

Frequently clean the drinking water system with Dufa-Aqua.

Packing:

1 litre bottles.
