

DUFA-CLEAN

Composition:

Contains an optimized blend of caustic alkali, organic sequestrants and high foaming surfactants and wetting agents.

Description:

Dufa-Clean can be used to sanitize and clean animal houses with an unique adhesive foam film power. The foam film contains a highly concentrated blend of caustic alkali, surfactants and wetting agents. Dufa-Clean is very effective for penetrating and emulsifying heavy dirt and grease deposits. Dufa-Clean penetrates deeper and dissolves the dirt better than other cleaners on the market.

Directions for use:

Remove dirt manually.

Dilute Dufa-Clean 3-5% in water.

Apply Dufa-Clean at min. 3 bar with a foam lance with cold water. The foam formation can be controlled by adjusting the distance of the foam lance to the treated surface and the water pressure.

Apply the foam as a thin coating on the surface.

The contact-time is 10-20 minutes, depending on the dirt.

Rinse with cold water under high or low pressure.

Precautions:

Dufa-Clean may not be used on soft metals, such as aluminium and galvanized materials. In case of doubt, it is advised to try the product on the individual materials first, before any prolonged use.

Always rinse surfaces thoroughly within 1 hour after use.

Storage conditions:

Store above 0°C, only in the original container in a secure, cool, well-ventilated area out of reach of children and domestic animals. Keep container closed when not in use.

Packing:

6 kg, 11 kg and 22 kg cans.
